Research your options for cosmetic or reconstructive dental work before making a decision to ensure the best possible care.

Prosthodontists are qualified to offer state-of-the-art procedures and techniques including:

- Bridges
- Complete and removable partial dentures
- Crowns/caps
- Dental implants
- Lost teeth replacement
- Teeth whitening
- Veneers

Prosthodontists also understand patients’ unique needs such as:

- Cleft palates
- Maxillofacial prosthetic procedures such as oral cancer reconstruction and continuing care
- TMD, TMJ or other jaw joint problems
- Traumatic injuries
- Snoring and sleep disorders

Rigorous training and expertise provide prosthodontists with a strong understanding of the dynamics of a smile and the preservation of a healthy mouth.

The ACP is recognized by the American Dental Association as the specialty organization for prosthodontics. Prosthodontists are experts in implant, esthetic and reconstructive dentistry.

PROSTHODONTISTS
PERFECT YOUR SMILE

As dentists with advanced specialty training, these experts create optimal oral health—functionally and esthetically—from dental implants, crowns and dentures to veneers and teeth whitening.
RESTORE YOUR TOOTHY GRIN

“Our prosthodontist helped me get my life back. I now can go out to eat with friends and family and feel happy and secure about my smile.”

Losing teeth in an accident or as you age can negatively affect your outlook on life. Simple pleasures—like saying “cheese” for the camera or dining with friends—become a source of embarrassment or stress.

Prosthodontists offer many options to restore one or all of your teeth:

- Bridges
- Complete and removable partial dentures
- Dental implants
- Lost teeth replacement

Whether you need to replace one tooth or many, a prosthodontist works with you every step, from initial consultation through follow-up care. Trained to manage the most complex dental restorations, prosthodontists have the special skills to restore your smile and your confidence.

FLASH THOSE PEARLY WHITES

“Visiting a prosthodontist has done a world of good for me. I feel like I look great. My teeth look just wonderful.”

Do you feel self-conscious about your smile or just want to improve it? Among the top impacts on a person's self-esteem is a healthy smile. If you, like many others, are unhappy about the “look” of your smile, consider consulting a prosthodontist.

Prosthodontists can fix broken, discolored, or misshapen teeth and related structures by:

- Crowns/caps
- Teeth whitening
- Veneers

YOUR SMILE REJUVENATOR

Prosthodontists can partly restore and replace teeth by:

- Taking three additional years in an American Dental Association-accredited graduate program after completing dental school.
- Quarterbacking the dental treatment plan. They regularly lead teams of general dentists, specialists and other health professionals to develop solutions for your dental needs.
- Creating generations of beautiful, healthy smiles by providing the highest level of dental care.

“After an accident, I never thought I could look like myself again—my facial bone structure was shattered. My prosthodontist brought my smile back to life.”
