

48TH ANNUAL SESSION  
OCT 31-NOV 3 • BALTIMORE

**Corporate-Sponsored Symposia**

Saturday, Nov. 3, 2018  
9:00 a.m. – 12:00 p.m.  
**3 CE**

*No advance registration is necessary.*

**Nobel Biocare**

**Treatment Solutions for All Indications – From Diagnostics to Long-Term Success**

Significant innovations in treatment possibilities and integrated workflows are providing marked improvements in solutions for all indications. This program will take you on a journey of identifying a new patient population by utilizing new digitally integrated workflows and dynamic surgical procedures to extending the boundaries of prosthetics for facial rejuvenation.

9:00– 9:10 a.m.

**Treatment Solutions for All Indications – From Diagnostics to Long-Term Success**

Moderator: Frank J. Tuminelli, DMD, FACP

9:10 – 9:50 a.m.

**Improving Treatment Results with Digitally Assisted Diagnostics and Treatment Planning**

Jonathan Ng, DDS

Digital data capture and new integrated workflows are providing marked improvements in treatment possibilities. Intraoral scanners are quickly becoming an integral part of the modern dental office. These improvements are allowing for enhanced collaboration throughout the entire treatment team and more precision in the delivery of better care. This presentation will emphasize the latest developments for a digitally integrated treatment workflow and the various steps in virtual planning that are critical for the delivery of successful implant treatment.

9:50 – 10:30 a.m.

**Comprehensive Treatment Concepts with Static and Dynamic Guided Surgical Procedures**

Peter Moy, DMD

New innovations in static and dynamic surgery now provide more options for the treatment of patients. Understanding considerations together with surgical and restorative factors are critical. This

presentation will review indications and limitations of static and dynamic surgery. It will review when to use these different treatment options and how to streamline predictable outcomes in your practice.

10:30 – 11:00 a.m.

**A Revolutionary Treatment Concept for the Edentulous Patient – Trefoil™ System**

Frank J. Tuminelli, DMD, FACP

This presentation will discuss a new innovative concept that offers the possibility of same-day rehabilitation of the edentulous mandible for a failing dentition in the lower jaw with a definitive implant-supported prosthesis. This new concept offers a simplified clinical workflow and was developed to offer a premium alternative to an entirely new patient population. Dr. Tuminelli will discuss his experience with Trefoil™ and how this new concept has expanded the number of patients he has treated with a fixed solution by reducing the treatment cost and time for the patient. He will provide an overview of both the surgical and prosthetic procedures.

11:00 – 11:30 a.m.

**Extending the Boundaries of Esthetics**

Joseph Kan, DDS, MS

This lecture will reveal a treatment journey extending the boundaries of prosthetics through a comprehensive systematic approach. It will review how through the pre-visualization of bone and soft tissue architectures you can merge the anatomical needs with the patient requirements for a natural-looking restoration and facial rejuvenation.

11:30 a.m. – 12:00 p.m.

**Panel Discussion**

---

At the conclusion of this symposium, attendees should be able to:

- Identify the critical steps in virtual planning for the delivery of successful implant treatment.
- Understand the benefits of when to use static vs dynamic treatment options.
- Identify new patients as candidates for a new cost-effective fixed mandibular solution.
- Understand how to provide natural looking long-term implant restorations through a systematic approach.
