Contemporary Materials for the Digital World

Markus B. Blatz, DMD, PhD, Jonathan L. Ferencz, DDS, FACP, Lyndon F. Cooper, DDS, PhD, FACP

Digital workflows enhance all clinical procedures from diagnosis to planning to provisional prosthesis design, fabrication, and final restorations. This program will provide an exciting overview and science of the next generation of all-ceramic materials. Innovative digital technologies along with a clinical workflow to enhance everyday practice will be discussed. This symposium will highlight the restorative materials available and the digital processes in which to produce optimal quality and esthetics.

At the conclusion of this symposium, attendees should be able to:

- Identify system workflow and integration between intraoral scanning systems and CAD/CAM milling machines.
- Recognize the advantages and limitations of the various parts of the digital workflow in a clinical setting and understand how the digital workflow can be used to efficiently design and fabricate quality restorations.
- Understand the differences in restorative material options along with the ideal application of each material.
