

Corporate Sponsored Symposia

Saturday, October 8, 2016

9:00 a.m. – 12:00 p.m.

3 CE

No advance registration is necessary.

DENTSPLY Implants

The Fully Digital Implant Patient: The Easy; the Difficult

Speakers: Mark Ludlow, DMD, MS

As digital technology becomes more pervasive in everyday practice, there is an increased demand to apply it in ever more expanding clinical situations. This presentation will explore the full application of digital technology in the implant patient from initial diagnostics to the final restoration and explore their relative ease or difficulty of use in each area. The format for this course will be a lecture for the first 1-1.5 hours followed by an optional hands-on with computer-guided software and drilling exercises for those interested.

At the conclusion of this session, attendees should be able to:

- Become familiar with digital treatment protocols in contrast to traditional workflows.
- Become familiar with digital technologies that enhance treatment outcomes.
- Be aware of the uses and limitations of digital restorative design and CAD/CAM production.
