Innovation in Science, Techniques, and Digital Workflows That Lead to Predictable Esthetic Implant Dentistry

Speakers: Sascha Jovanovic, DDS, MS; Joseph Kan, DDS, MS; and Sundeep Rawal, DMD

Achieving anterior implant esthetics is a challenging and demanding procedure. Dr. Jovanovic will discuss techniques to create implant restorations with harmonious gingival contours that emulate nature. Dr. Kan will discuss how patients are demanding shorter treatment times and high-esthetics. His presentation will show how placing and temporizing a dental implant at the time of extraction is not only more beneficial for the patient but also backed by clinical research.

In an ever changing and challenging world of treatment solutions and materials, Dr. Rawal will review how to create restorations for implant prosthetics. Emphasis will be placed on the latest developments of the integrated treatment workflow.

At the conclusion of this session, attendees should be able to:

- Understand the optimal clinical treatment protocol for various grafting situations.
- Understand management of the implant socket gap, inter-implant papilla, and surgical and prosthetic complications.
- Recognize the importance of thorough diagnosis and treatment planning through the virtual world and understand guidelines for proper implant restoration with the end prosthetic result in mind and for optimal patient outcomes.
